

Profile

Dennis Freed has over four (4) decades of construction and real estate development experience. His experience spans a multitude of different types of development and construction projects. Dennis and his teams have consulted on and built over seventy (70) construction projects in mixed use, rental residential, condominium, commercial, tenant fit out, churches, schools, universities, museum, landmark renovations, parks, theaters and hazardous waste sites.

Major Accomplishments and Qualifications

- Dennis's experience covers every aspect of the pre-construction, pre-development, development, construction, and post construction process with extensive knowledge in both ground up and renovation projects. His years working and consulting for developers, as well as construction companies, has further rounded out his experience in the development of a project. His extensive knowledge in materials, processes, safety, and manufacturing is unique in understanding problems as they arise to offer innovative solutions.
- As Principal-in-Charge with Lend Lease Construction, he developed one of the largest high-rise residential construction groups in the U.S. He has performed billions in on-time and on-schedule work hours and supervised over 200 employees. Structured his construction teams to be able to perform both project management and superintendent work permitting flexibility and cost savings. As PIC, he was responsible for the financial health and success of his division.
- Key executive member of the strategy and Investment/development Committees that made critical decisions on the allocation of the company's capital in both construction and development projects based on clearly defined risk return criteria. Dennis Identified key risks and rewards and developed flexible strategies to mitigate potential current and future development and construction complexities due to market conditions, personnel, construction difficulties, governmental regulation, and supply chain management.
- Renovated and repositioned numerous landmark and non-landmark buildings. Building use and changes included residential, commercial, museum, school, university, theater, medical and religious institutions. Supervised structural reinforcements, added and removed floors, gut rehab, worked around existing tenants, extended cellars depths, utility upgrades, façade renovation or recladding, MEPS changes, and performed other difficult construction tasks. His teams led safety efforts in New York City (NYC) by inventing and implementing numerous construction safety measures that dramatically decreased time loss, injuries and property damage resulting in reduced project costs and liabilities. For example, his teams implemented the first four (4) building envelope cocoons and the use of lifting platforms in NYC. Awarded the Lend Lease U.S. Safety Leader of the Year and the International Safety Team Award for his leadership and commitment to safety in construction.
- Tens of billions of construction dollars were filtered through Dennis's oversight resulting in zero legal, arbitration or mediation actions. He has successfully closed out every construction project without further legal action from the developers, construction managers and the subcontractors.
- Negotiated numerous Project Labor Agreements (PLAs) and disputes with the NYC Construction Unions. Negotiated the first PLA immediately following the 2008 crash and

saved the project \$20 million, which enabled the project to proceed with construction while many others were halted.

- Managed and resolved millions in dollars of construction insurance claims ranging from water infiltration to failed construction cranes.
- Member of the Lend Lease 401k advisory board.
- His relationships span all disciplines and agencies, including the NYC Department of Buildings, Con Edison, architects, engineers, consultants, construction managers, subcontractors, material manufacturers and union officials. He has successfully negotiated numerous agreements, contracts and understandings with these industry leaders.
- Pioneer for Women in Construction. Numerous female employees were mentored by Dennis and have gone on to become Real Estate and Construction Executives.
- Assisted numerous small and new subcontractors, consultants, and designers to challenge the business and create new methodologies while reducing costs to build.
- Traveled to scores of manufacturers of numerous material types and systems to review, negotiate, expedite, and employ quality control with manufacturers in the U.S., Canada, Europe and China.
- Construction engineered the first modern high-rise exposed concrete residential buildings in conjunction with GKV Architects.
- Introduced numerous façade solutions including handset precast panels and curtain wall designs.
- Construction-engineered and built the first two (2) slender buildings in the world, Sky House and One Madison Park, according to CNN article dated February 13, 2018.
- In 1986, created a scheduling matrix system, which provides detailed and accurate indication of a project's performance and has been adopted by the construction industry.
- Numerous concrete, design, and construction awards.
- Chairman and co-wrote the Lend Lease EIFS and Synthetic Stucco guidelines for construction.

Work History

- Dennis Freed Consulting – Principal
- Macklowe Properties – Executive Vice President of Development and Construction for One Wall Street
- The Lightstone Company – Senior Vice President of Development and Construction
- Lend Lease Corporation – Principal in Charge
- George A. Fuller Company – Operations Director
